Final Project: HTML+SASS
Due date: 15th December, 2023
Overview

For this project you will create a **landing page or multi pages**. It will look very similar to the example shown here.

Instructions

- Make an HTML and SASS **landing page** of any type of imaginary business. It could be a product promotion, product detail, company website.
  Only use **SASS** for your CSS infrastructure.
- All of your style properties must be defined in the CSS file. You will lose points for any style properties defined in the HTML file.
- It has to be **responsive**. Make it mobile, tablet and desktop-friendly.
- It's important to understand who your target audience is, why they would come to your site, what information they want to find and when they are likely to return.
- Use new **HTML5** elements
- **SEO** is something that you shouldn't neglect in your projects. Use this slide to follow best practises for HTML 5 structures:
  https://www.webfx.com/blog/web-design/20-html-best-practices-you-should-follow/
- JavaScript is optional as we have not covered The HTML DOM tree
- If you want you can create any project by yourself as well, just make sure you have to submit anything that involves html and scss.

Submission

Please submit the zip for the project
